# Envirokleen®

The biodegradable solution for a long-lasting dust control  
**Dust control without water**

## THE PROBLEM OF DUST PM 2,5 AND PM 10

It's dangerous. It's damaging. It's everywhere. Everywhere you go you have to manage with the toxic effects of dust. Some traditional systems can create problems even more dangerous than dust itself. Using the wrong product or using it incorrectly can create environmental and health problems. Alternatives such as watering need frequent and expensive applications that provide temporary solutions, but in the long run they intensify the problem. In fact, water makes the surface softer, which creates irregularities due to the passage of vehicles, and this is one of the main causes of dust.

## THE FULL SERVICE SOLUTION

The solution to the dust problem is ENVIROKLEEN, a product with an advanced technology to control and eliminate dust in the long term in a wide range of applications: rural roads, building sites, mines, landfills, cement production plants, etc.

**Envirokleen®** is produced by using a patented process.

The result is a crystal clear organic fluid, biodegradable in natural spaces and non-toxic for people, fauna and flora.

It doesn't evaporate or freeze, and it remains working on the soil surface also against the dust that comes after the application.

## MAIN PROPERTIES

- BIODEGRADABLE
- EASY TO APPLY
- APPLICABLE IN EVERY SEASON
- LEAVES NO TRACES ON THE SOIL
- ODORLESS AND UNCOLORED
- IT DOESN'T STICK TO THE WHEELS
- CUMULATIVE EFFECT
- INSOLUBLE IN WATER
- IMMEDIATELY ACCESSIBLE FOR VEHICLES
- LONG-LASTING UP TO 3-4 MONTHS

*Application in parking lots*

*After*

## HOW IT WORKS

Once applied, **Envirokleen**<sup>®</sup> wraps the soil fines and it prevents the raising of the dust by making it heavy. It is the best solution to suppress dust in the long term.

**Envirokleen**<sup>®</sup> acts effectively on the fines on most natural soils, no matter the weather conditions; it is not recommended for grainy and clay soils. It is ideal for internal and external applications in all types of area, from the most normal to the most congested.

**Envirokleen**<sup>®</sup> is applied without water, so it doesn't need to be dried and it is **IMMEDIATELY EFFECTIVE AND PASSABLE**.

In comparison to other products, another advantage of **Envirokleen**<sup>®</sup> is its efficacy also against the dust that occurs after the application of the product. It is effective up to a dust thickness of 25/30 mm.

## APPLICATION

The application quantity varies depending on the site conditions and on the dust quantity, from 1L x 4-5 sq.m to 1L x 2 sq.m.

The product should not be nebulized, but sprayed through low-pressure pumps with V nozzles. In case of a thick layer of dust, we suggest to apply the product in several stages.

**Envirokleen**<sup>®</sup> is applied without being diluted and without any soil preparation.
